

# PROJECTS PROMOTING THE DEVELOPMENT OF RENEWABLES AND ENERGY EFFICIENCY

## Affordable and Clean Energy

Potential Goal

Agenda 2030

ENEA provides feasibility studies, technical support, technology transfer and training courses aimed both at developing renewables, particularly solar energy and biomass, and at the efficient use of energy in developing countries, within the international cooperation framework .

### Benefits and Advantages:

- production of energy from renewables
- diffusion of sustainable energy systems
- creation of skilled staff
- impact on society and economy

### ENEA Service:

- design
- capacity building
- technical support
- consulting
- training
- qualification and certification

### Completed and Ongoing Activities:

ENEA is partner to the PWMSP – Paving the Way for the Mediterranean Solar Plan (<http://www.pavingtheway-msp.eu/>) – an EU-funded project to assist the Mediterranean target countries –Egypt, Jordan, Lebanon, Morocco, Algeria, Tunisia, Israel and Palestine– in creating the conditions for a greater use of sustainable energy systems based on renewables. The project is implemented by developing training and capacity building programmes, promoting professional qualification and certification systems in the energy sector, in compliance with the European Qualifications Framework (EQF). The project is also aimed at raising the awareness of target countries on the pivotal role of sustainable energy and energy saving, and on the societal and economic impact of adopting a correct energy policy.
