

# E-LEARNING TRAINING PROJECTS

## Quality Education

Potential Goal

Agenda 2030

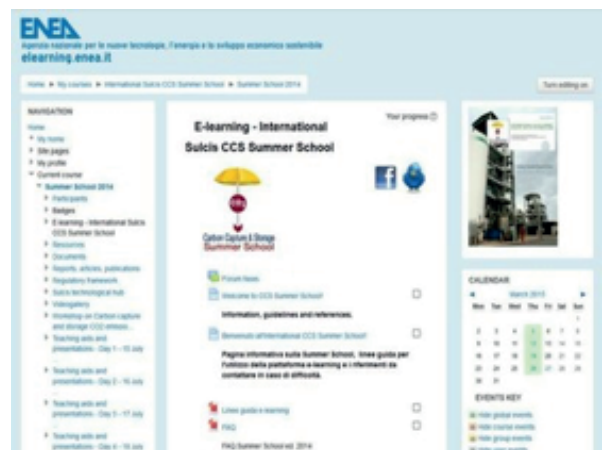

ENEA develops and offers remote or blended learning programmes and initiatives through the production of educational contents and their delivery through a Learning Management System. The training courses are developed by way of dedicated software, and managed thanks to an open-source Moodle platform. The latter provides users with a full set of functions: user registration and identification; structuring of courses, planning of educational contents; tracking of users' activities; delivering of evaluation tests; filing of users' contributions.

### Benefits and Advantages:

- diversified contents;
- targeted and flexible training;
- customization based on the specific needs of the project and/or intervention

### ENEA Service:

- design
- technology transfer
- technical support
- consulting
- training

### Completed and Ongoing Activities:

ENEA currently manages and offers to internal and non-ENEA users an overall amount of 140 courses. Specific courses have been developed to answer the requests by the Italian Ministry of Economic Development, in the framework of National and EU-funded projects, in collaborations with companies, universities and high schools.

### Keywords:

Training; e-learning; ICT; web; internet.
