Overall Evaluation

(Rating Scale 1 = lowest value, 5 = highest value)

Did you know ENEA's activities prior to the Training Day?

■ No, I did not know their activities

■ I knew very little prior to the visit

***18 students gave their feedback on this topic**

Which topic has been more interesting to you?

- Smart cities and everything related to data analytics.;
- Sustainability and circular economy;
- Circular economy;
- Circular Economy;
- The visit at the lab;
- Systems Automation;
- Smart The two dimensions of Circular Business Models;
- Smart cities, circular economy and the researches to produce some of the critical raw material (phosphate);
- Smart grids, finance and economy, business actions ;
- Circular Economy;
- Value chain;
- Smart Grid;
- Smart city;
- The lab visit in the afternoon;
- All;
- Smart cities;
- Circular Economy, smart grids and electric cars;
- Smart Cities / Smart Grids;

Which topic should be further examined in your opinion?

- Smart Cities and Fair Society;
- Circular economy related to plastics ;
- Circular economy, actual business application;
- How the research directly benefits the community and how/if results are communicated to the public;
- The dismantling of the nuclear site;
- Windmills and other green energies compared to the possible return of nuclear energy and the impact of households and cost;
- The two dimensions of Circular Business Models; I would deeper understand how to increase the Value Proposition and the Value Network in order to reach a Full Circular Economy;
- Circular Economy as it is a mine of business ideas.;
- Economics and business involvement ;
- Circular Economy and the process of innovation to a sustainable world or maybe the new trends;
- Blockchain research and Big Data issues;
- Smart city;
- The actual use of the researches;
- The speeches were very interesting but we were not told how we could enter the organization to work: what kind of profiles are they looking for, etc.;
- How the research effect policies;
- Smart grids and electric cars;
- Integration of Smart Grids;

Do you have any suggestions to improve the quality of the training day?

- I think it could have been better to present two topics instead of four, but deeper.;
- Improve the communication level and show more about the activities carried out at JRC;
- Improve public skills, focus on few topics, make it more interactive, visit more labs;
- It would have been great if an HR responsible would be have been present in order to ask questions and inform about positions;
- In my opinion it should be better switch the overview picture of the facility with the speeches part, to understand better the framework of the site;
- Provide the slides;
- I would make the sessions more interactive, not only regarding he Q&A (this was just perfect); may I would create some work groups in order to develop an assignment for example;
- Trying to stress more the business opportunity that can come out from the innovative research of ENEA;
- Allow more times for questions ;
- Most of us didn't know the content of training beforehand. it is better to share it earlier so that we can be prepared to receive the training;
- More time in the lab and less speeches.;
- Take time to understand the connection between us MBA students and the research center in terms of job opportunities;
- The little show around of the visitors center after lunch is not necessary;
- No;
- Survey the topics and request questions prior to the day of the event. ;
