“The Energy Efficiency directive and its impacts at European level”

March 26th 2012 - European Parliament

JAN – 6Q1

Though the Energy Service Directive implementation is still the most powerful driving force in improving end-use energy efficiency and in creating the energy service market in the EU, there is a need for a new set of measures to reach the 2020 Energy Efficiency target. To this aim the Commission, in mid-2011, has drafted a new Energy Efficiency Directive proposal as part of its effort to reach such a target.

The purpose of the event is to provide an overview of the draft proposal set to underpin the bloc's efforts to cut 20% of Europe's energy consumption by the end of the decade, along with some of the main results so far achieved in terms of energy savings from the implementation of the ESD 2006/32/EC in one big EU Member State (Italy).

The presentation about what occurred between the first NEEAP(2007) and the second NEEAP(2011), in terms of best practices and most cost-effective EE improvement measures adopted, in each end-use sector, can contribute to fill the gap, put back the MSs on track and facilitate the implementation of the new EED.

Draft agenda

18.00

Opening

Antonio Cancian - MEP (confirmed),
XXXXXX - MEP (under confirmation)

State of the art of the new Energy Efficiency Directive

Paul Hodson DG ENER - Head of energy Efficiency Unit - European Commission (confirmed)

Implementation of the EE Directive: how it has been working

- The Italian case – *Rino Romani - ENEA (confirmed)*

The importance of the EE Directive for Industry

Massimo Baldinato - member of Vice President Tajani's Cabinet (confirmed)

Discussion

20.30 Conclusions
